

IDEATHON · CHALLENGE 1 — BUILD AN AI SYSTEM

Redrob Fit

A recruiter copilot that ranks candidates for fit — not keywords

Paste a job description. Get a trustworthy, reasoned shortlist from a 100K pool in under a minute — on a laptop, no cloud.

Rishabh Gaikwad

The challenge — and why it matters

Challenge 1 — Build an AI System. An AI-native system that makes real work smarter: intelligent search + ranking that changes how recruiters hire.

Recruiters drown

Hundreds of profiles per role.
Keyword filters surface whoever stuffed the most buzzwords — and bury the genuinely qualified.

Keywords ≠ fit

An HR Manager listing 9 AI skills out-ranks an engineer who actually shipped a recommender but never wrote “RAG.”

Availability ignored

A perfect resume that's been inactive for months is a dead end recruiters only discover after wasting outreach.

Hiring is a ranking problem dressed up as a search box. We fix the ranking.

The solution — how Redrob Fit works

It reads the JD's intent, then judges each candidate the way a great recruiter would — and shows its reasoning.

Understands the role

Parses the JD into real requirements, must-haves and disqualifiers — not a keyword bag.

Judges the whole person

Hybrid semantic + lexical match on what they DID, plus career trajectory and platform signals.

Filters noise & traps

Down-weights keyword-stuffers and the unavailable; detects impossible profiles.

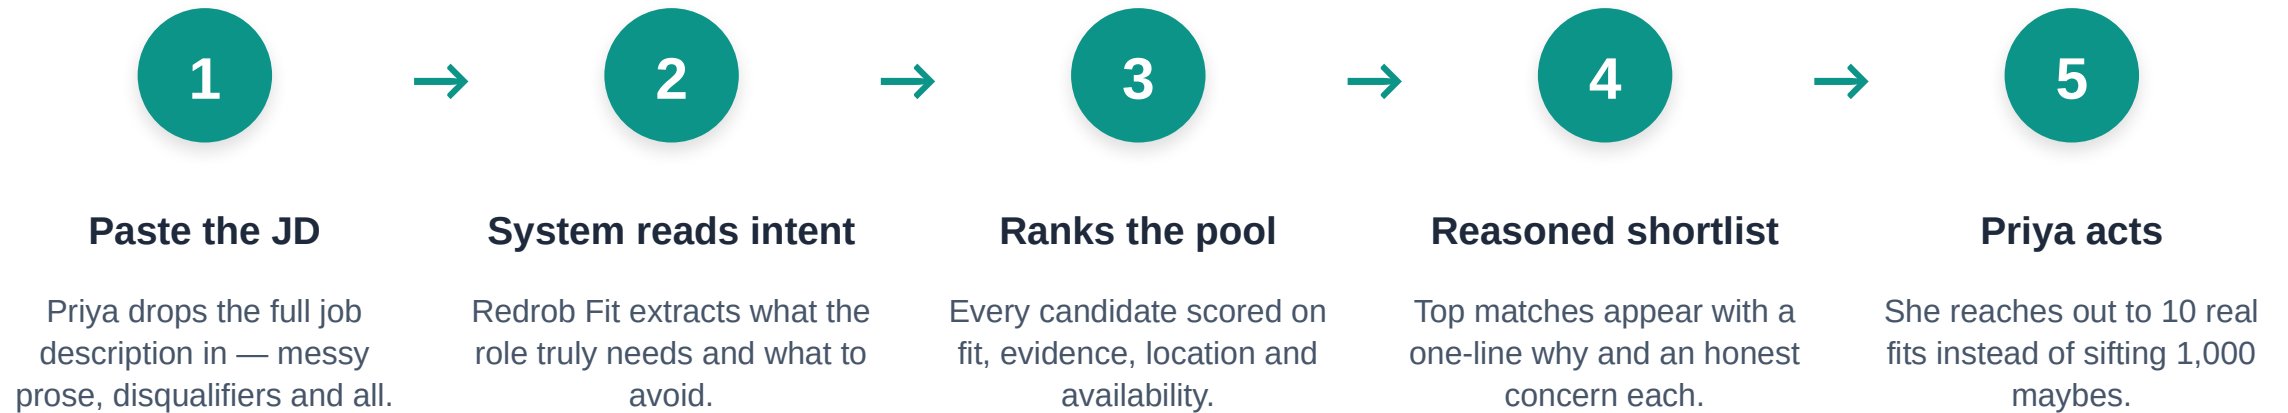

Explains every pick

A plain-language reason per candidate, so a recruiter can trust and act on the list.

Runs on a laptop. 100K candidates ranked in under a minute, fully offline — no per-candidate LLM calls, so it scales to millions in production.

The user journey

Priya, a startup recruiter, needs one founding AI engineer from a 100K pool.

Time to a trustworthy shortlist: **days** → **under a minute.**

Wireframe — the recruiter view

Job description

Senior AI Engineer, founding team. Must have shipped ranking / retrieval to real users at a product company. Pune/Noida. No pure-research, no keyword stuffers...

Rank candidates

Ranked shortlist

1

ML Engineer · 7.2 yrs · Noida

0.99

Built re-ranking at a product co · open to work · 61% response

2

Recommendation Sys Eng · 6.1 yrs · Pune

0.98

Shipped recommender + semantic search · responsive

3

Applied ML Engineer · 6.2 yrs · Ahmedabad

0.97

Retrieval + relevance work · concern: notice period

Every row carries a reason and an honest concern — the recruiter trusts the list because it shows its work.
